

# Assignment 2: Competitor Analysis – Dog Adoption Applications

## Objective

To study existing dog adoption applications and understand user feedback to identify strengths, weaknesses, and opportunities for improving the user experience.

## Competitor Apps

Petfinder, Adopt a Pet, PetRescue, PetBacker, and Get Your Pet are popular platforms that connect adopters with shelters or pet owners.

## Positive Feedback

- Easy-to-use interface.
- Good search and filter options.
- Detailed dog profiles with photos.
- Trusted shelters and organizations.
- Helpful notifications and adoption guidance.

## Negative Feedback

- Outdated or unavailable dog listings.
- Slow responses from shelters.
- Missing health or vaccination information.
- App crashes and performance issues.
- Complicated adoption forms.
- Limited customer support.

## Common Findings

Users appreciate simple navigation, verified dog information, and easy communication. However, they are frustrated by outdated listings, delayed responses, and the lack of real-time application tracking.

## UX Insights

A better dog adoption app should include:

- Real-time profile updates.
- Verified health records.
- Easy application process.
- Adoption status tracking.
- In-app messaging.
- Push notifications.
- Advanced search filters.
- Fast and stable performance.

## Conclusion

Competitor analysis helps identify what users expect from a dog adoption platform. By learning from existing applications, designers can create a more reliable, user-friendly, and efficient adoption experience.
